Communicatin and Networking – Creating an E-mail Account

Presenter: Judith

01 Creating a New E-mail Account

Choose an E-mail Service

Select a Trusted Provider

Choose a reliable service, such as Gmail, Outlook, or Yahoo Mail, that offers familiar security features and dependable access for school and personal communication.

Verify Website Security

Before entering personal information, confirm the address begins with "https," which indicates an encrypted connection and helps protect details during account creation.

Protect Your Information

Use only trusted platforms and carefully check website addresses before sharing your name, password, phone number, or other personal details online.

Open the Official Service

Open the provider's official website or application, then select "Create account" or "Sign up" to begin registering your new e-mail address.

Avoid Unknown Links

Do not create accounts through unfamiliar links, pop-up messages, or unofficial websites; these may imitate real services and steal passwords or personal information.

Enter Personal Information

Enter Your Name

Type the user's first and last names accurately, checking spelling carefully because this information may appear on account profiles or messages.

Choose a Username

Choose an available, appropriate username that is easy to remember, avoids personal details, and represents the account respectfully for school or communication.

Create a password

Create a strong password combining uppercase and lowercase letters, numbers, and special characters; avoid common words, names, birthdays, or easily guessed patterns.

Add Recovery Information

If requested, provide a phone number or recovery email address you can access, helping you verify ownership and regain the account later.

Complete Details

Enter your date of birth and every other required detail correctly, reviewing the form before continuing to prevent errors or delays.

Complete Account Verification

01

Review Terms and Privacy

Read the provider's terms and privacy information carefully so you understand how your data, messages, and account activity may be collected, stored, or used.

02

Choose a Verification Method

Start verification with an OTP, phone number, or recovery method provided by the service, choosing an option you can access safely and reliably.

03

Enter the Code Officially

Enter the verification code only on the provider's official account page; never share it with friends, strangers, pop-ups, or suspicious websites.

04

Confirm Your Details

Check your name, username, recovery information, and other account details, then confirm everything before selecting the button that completes registration.

05

Test the Mailbox

Sign in once after registration to confirm the mailbox opens, settings work, and you can safely send or receive a test message.

Thanks
